

<oXygen/>[®] XML Author

Content Authoring

<oXygen/> XML Author is the most efficient solution for implementing single source publishing and content reuse.

- **Visual XML Authoring**

The visual XML editing mode makes authors more productive by hiding the complexity of markup and providing a clean and intuitive interface specially tuned for content creation.

- **DITA and DocBook Ready**

The <oXygen/> XML Author delivers a complete, fully integrated solution for the two major XML documentation frameworks.

- **Single Source Publishing**

Publish in a variety of different output formats: for the web (HTML), for print (PDF) or for use with applications (Java, Eclipse, Windows Help, WebHelp) from a single source of content.

- **CMS Integration**

<oXygen/> XML Author can access documents stored in WebDAV enabled Content management Systems and provides a Java API for creating connectors for other types of CMSs.

- **Highly Configurable and Extensible**

The built-in XML publishing frameworks can be configured or enhanced with custom actions. New or modified frameworks can be easily deployed throughout your organization.
