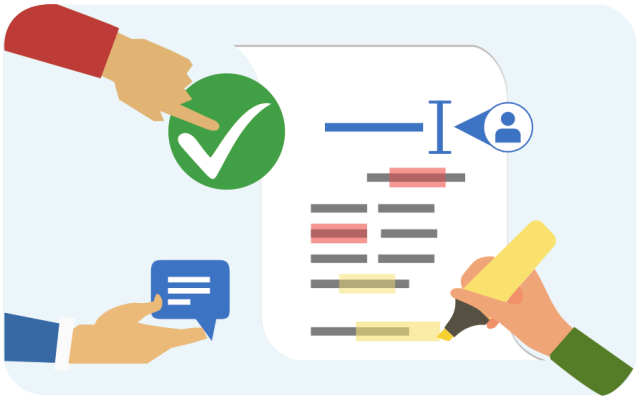
Oxygen Content Fusion

Collaborative Reviews

Bring subject matter experts into the review, in their browser

Expert feedback, without the friction.

Content Fusion lets authors share content with subject matter experts in an access-controlled web space. Experts review in their browser with no XML knowledge needed, several people can work on the same content at once, and every suggestion is tracked back to the person who made it.



Why teams choose it

- ✓ No XML knowledge or installation needed for reviewers
- ✓ Real-time co-editing, with no file locks
- ✓ Every change tracked and attributed
- ✓ Native XML end to end, with no file conversions

Comment and suggest

Comments from a floating toolbar, tracked changes and @mentions with email links.

Stay on schedule

Due dates, email reminders and a dashboard with live reviewer status.

Merge with confidence

Integrate feedback using a visual comparison and merge tool.

How it works

1 Create a task

From a project, the Files view, or Oxygen XML Editor/Author.

2 Invite reviewers

Experts open the task in their browser, with no setup.

3 Collect feedback

Comments, replies, mentions and suggested edits, all in context.

4 Integrate

Close the review and merge accepted changes into the project.

Collaborative Reviews: Capabilities

For reviewers

Browser-based review
Read, comment and edit in a clean visual editor in the browser, with nothing to install or learn.

Suggest edits
Propose changes directly in the content; change tracking shows authors exactly what you suggest.

Comment on any selection
Select text and add a comment from the floating toolbar in one click, right where it applies.

Search the whole task
Find text and comments across every file in the review, instead of opening documents one by one.

For task owners

Review Task Dashboard
See the status, due date, owner and source branch of every review at a glance, in one dashboard.

Control edit access
Decide per task whether reviewers can edit freely, only suggest tracked changes, or only comment.

Live reviewer status
Know who has finalized, who is still in progress and who has not started, without chasing anyone.

Request re-review
Reopen a finished review and notify reviewers; they see exactly what changed since their last pass.

Communication

@mentions
Mention an expert in a comment and they get an email with a direct link to the exact spot in the text.

Task activity
Each task has a shared message stream, with filters and notifications that keep everyone informed.

Rich notifications
Notification emails include the full text of review comments, so people can respond right away.

Due-date reminders
Reviewers get email reminders before the deadline, so reviews finish on time without follow-ups.

Fits your workflow

From Oxygen desktop
Create review tasks and integrate the feedback right from Oxygen XML Editor or Oxygen XML Author.

AI-assisted follow-up
AI Positron actions such as Resolve Comments and Proofread help authors act on feedback faster.

From DITA/Git projects
Start reviews from your Content Fusion projects; all feedback is tracked on a dedicated Git branch.

Any XML vocabulary
Review DITA, DocBook, S1000D or any other XML content in the same browser-based review workflow.

One platform for the complete documentation lifecycle

Structured content | **Collaborative reviews** | AI agents | Automated publishing | AI translation
