Oxygen Content Fusion

For Documentation Managers

Visibility, automation and control for your documentation team

Ship documentation faster, with less risk.

Content Fusion gives your team one platform for authoring, review, translation and publishing. You see where every review stands, builds and deployment run automatically, AI is used under clear rules, and your content stays in open DITA and Git that you own.

Your challenges, solved

Reviews stall and deadlines slip	A dashboard with due dates, email reminders and live reviewer status shows where each review stands.
Publishing depends on manual steps	Automatic and scheduled builds deploy PDF and WebHelp to production, with no one running a build.
AI adoption feels risky	AI works in personal sandboxes, every change is reviewed, and policy hooks block risky requests.
Switching systems means lock-in	Content stays in open DITA, in Git repositories you own, in the cloud or on your own servers.
Translation costs keep growing	Incremental AI translation retranslates only what changed, with glossaries and review before commit.

What changes for your team

Writers focus on content
Visual browser editing and AI actions take care of repetitive work.

Experts actually review
Reviewers work in their browser, with no XML knowledge or setup.

Releases stay on schedule
Builds and deployment run on every change or on your schedule.

For Documentation Managers: What You Get

Visibility & control

Review Task Dashboard
See the status, due date, owner and source branch of every review at a glance, in one dashboard.

Live reviewer status
Know who has finalized, who is still in progress and who has not started, without chasing anyone.

Build metrics
Track runs, success rate, duration and wait time for every deliverable your team publishes.

Roles & access
Keep projects private and give each team member an Owner, Maintainer or Collaborator role.

Speed & automation

Automatic & scheduled builds
Builds start on every repository change or on a schedule, with no manual publishing step.

Automatic deployment
Output goes live on Content Fusion Docs, Amazon S3, Netlify or SFTP as soon as a build finishes.

AI agents for heavy lifting
The Planner agent turns project-wide requests into steps and delegates them to specialized agents.

Incremental AI translation
Only content that changed is retranslated, with glossaries enforced and review before commit.

Risk & ownership

Open standards
Your content stays in standard DITA, in Git repositories you own, so there is no platform lock-in.

Every change reviewed
Human and AI edits stay in personal sandboxes until they are reviewed and committed.

Governed AI
Policy hooks audit AI activity and block risky requests; you choose the AI provider and models.

Quality gates
Validate DITA rules, links and key references across the whole project before you publish.

Deployment & security

SaaS Cloud
Instant setup and no maintenance: infrastructure, updates and security are handled for you.

On-Premise
Run Content Fusion behind your firewall, with LDAP integration and full control of your data.

Single sign-on
Team members sign in with their existing company identity through OpenID Connect single sign-on.

Built on Oxygen
Uses Oxygen XML Web Author and Oxygen Publishing Engine, by the makers of Oxygen XML Editor.

One platform for the complete documentation lifecycle

Structured content | **Collaborative reviews** | **AI agents** | **Automated publishing** | **AI translation**
