

Content Fusion

The Web-based Collaboration Platform to Craft Tomorrow's Content

Content Management | Collaborative Reviews | Automated Publishing

Content Management

Git-based DITA Projects

Manage DITA publications leveraging the state-of-the-art DITA support offered by Oxygen on top of the powerful revision tracking provided by Git.

Authoring Workspace

Make updates across multiple files in your personal workspace, and after you review and validate your changes you can commit them in the project Git repository.

File Comparison Tools

Use the built-in XML comparison and merge tools to easily review document changes and apply suggested solutions for merging and resolving conflicts.

Markdown Support

Create and edit Markdown files, link them in a DITA map alongside your DITA topics, and publish everything with a consistent appearance.

Seamless Adoption

Connect Content Fusion to your Git repository without interfering with your existing tools and workflows that use that Git repository, it simply acts as another Git client.

AI Assistant

Use the Oxygen AI Positron Assistant to generate AI-enhanced content, correct grammar, translate, and create structure while editing or reviewing.

Content Fusion

The Web-based Collaboration Platform to Craft Tomorrow's Content

Content Management | Collaborative Reviews | Automated Publishing

Collaborative Reviews

Concurrent Editing

Allow multiple users to work on the same document simultaneously with concurrent editing, displaying real-time updates in the main editor and activity stream.

Changes Traceability

Inspect all changes and suggestions made by reviewers in the activity stream, and export them as a Git repository containing the entire revision history.

Oxygen Integration

Initiate reviews seamlessly by creating review tasks not only from the web-based interface but also directly from the **Oxygen XML Author** or **Oxygen XML Editor** desktop applications.

Automated Publishing

WebHelp and PDF Output

Transform your DITA content into professional deliverables in modern WebHelp and PDF formats using the built-in publishing features.

Customizable Templates

Choose from a variety of built-in templates to customize your output's appearance, and use the Oxygen Styles Basket for further personalization.

Continuous Delivery

Configure automated builds directly in the interface to streamline the deployment process on platforms like Amazon S3, Netlify, or any SFTP server.
