Content Author attaches documents to a new task and uploads it to Content Fusion in just 1-2-3 steps:

1. **Create Task**
   - Content Author attaches documents to a new task and uploads it to Content Fusion.

2. **Share**
   - Content Author shares a link to the task with contributors who review the documents.

3. **Merge Changes**
   - Content Author uses built-in merge tool to integrate the changes back into Oxygen.

---

**XML Editor** is a complete XML development and authoring platform.

**XML Author** is the most flexible solution for working with XML content.

**XML Web Author** provides review and authoring in the browser & across devices.

**Content Fusion** enables flexible collaboration to enhance your workflows.

www.oxygenxml.com/contentfusion
Oxygen Content Fusion is a flexible, intuitive collaboration platform designed to adapt to virtually any type of workflow that a collaborative team may use for their documentation.

**Content Author**

Oxygen Content Fusion allows a Content Author to create tasks, selecting the documents that need to be reviewed. Then they simply share a link with Reviewers. Once the review process is finished, they use a built-in merge tool to automatically integrate the changes back into Oxygen XML Editor or Oxygen XML Author.

**Reviewers**

Reviewers simply follow a link to open the task in their browser where they can proofread, add comments, or contribute changes in a very simple, intuitive editor. They can share the files with other Reviewers and communicate with the Content Author directly from the Oxygen Content Fusion interface.

Since every team has their own specific methods of collaborating, Oxygen Content Fusion was designed to be very flexible so that it can be used and integrated into virtually any type of documentation workflow.

Powered by Oxygen XML Author technology, it takes advantage of user-friendly XML authoring features and the browser interface is very simple and intuitive to accommodate every type of user.

The Content Author uses a simple tasks management view to upload files and ultimately have access to a built-in merge tool to seamlessly integrate changes and comments back into Oxygen XML Editor or Author.

Oxygen Content Fusion is currently in Beta stage so that we can continue to test and improve its development prior to the official release.
