Oxygen supports Add-ons to enable third-party developers to create specific abilities which extend Oxygen features. Examples of such Add-ons are: plug-ins, new frameworks for XML document types, customization of an Oxygen framework for a default document type (DITA, DocBook, TEI, etc.) or extensions to access Oxygen XML Eclipse plug-in features from your own Eclipse plug-in.
- e. "Software" means the Oxygen XML Software Development Kit (SDK) which enables you to develop Add-ons or Applications. The Software is comprised of libraries, source code, APIs, sample code and online or electronic documentation.
- f. "Web Author Component" is a subset of Software composed of a server component operating as a service application and a client component deployed to a web browser, such as an HTML5 based application, where the client component is not installed on the client machine but is in use by the client machine while the browser is connected to the server component.

- g. "Author Component" is the subset of the Software that is directly integrated in Application in order to provide functionality for editing and authoring XML documents.
- h. "Application" is any custom software application that you have developed using Software that embeds a Web Author Component or integrates an Author Component. A group of independent computer systems, which outwards appear as a single web server and work jointly to balance the workload for server applications is considered a single Web Author Server, if all such systems are connected to the same License Deployment Manager.

2. The Development License is subject to a registration to and approval by Syncro. If your registration is approved, except for developing Add-Ons, you will obtain an account and instructions how to configure the Software to connect to Syncro Development Server for an initial twelve (12) months activation ("Development Period"). The Development Period may be extended for successive terms subject to request to Syncro. The Syncro Development Server contains a feature that will automatically disable the connected Software at the end of Development Period. Syncro will have no liability to you if this feature disables the Software.
3. You may make available your Application (having the Software activated through the Syncro Development Server) to your prospects provided the evaluation version expires within 30 days and provided that your Application is covered by an evaluation license agreement that provides that the prospect may only use it for evaluation purposes. No deployment license fees will be payable for evaluation versions of the Application deployed in accordance with this paragraph.
4. Sample Code: Software may include certain sample code that is designed to be modified and included in Add-ons or Applications created using the Software (collectively, the " Sample Code "). Subject to all the terms and conditions set forth in this Agreement, including without limitation, the payment of the runtime licensing fees set forth in this section, Syncro hereby grants You a non-exclusive, non-transferable, worldwide license to reproduce exact copies of the Author Component and include such files in the Application, and to deploy the Application on your owned and controlled computers and networks for use by your employees, contractors and affiliates and/or to commercially distribute the Application, directly and through customary distribution channels, to end users for their use without further distribution. You must purchase a runtime license for each deployment of Application. For purposes hereof, an "Author Component Deployment" includes Name-User Deployments and Concurrent Deployments as hereinafter defined:
 - a. Floating Oxygen Licenses. If the Application will be used by You internally (that is you are the End-User), You will have the option to buy or use already bought regular floating Oxygen Editor or Author software licenses that will enable (more than the normal usage conferred by the Oxygen license) the runtime usage of the Author Component as it was integrated into the Application.
 - b. Author Component Named-User Deployment. An "Author Component Named-user Deployment" means installation of the Application by You and/or your customers for use

by a single named user. The sharing of the Named-user Deployment License by more than one individual is expressly prohibited.

- c. Author Component Concurrent Deployment. An "Author Component Concurrent Deployment" means that the number of end users belonging to one of your customers accessing the Application at any one time may not exceed the number of concurrent deployment licenses obtained by You for that customer. For each of your customers You are required to purchase a separate Component Concurrent Deployment license.

If the Application will be used by You internally (that is you are the End-User), You will have the option to buy or use already bought regular floating Web Author software licenses that will enable (more than the normal usage conferred by the Web Author license) the runtime usage of the Web Author Component as it was integrated into the Application.

- 2. For each Web Author Component Deployment License, Syncro will provide You with a unique key-code (License Key) for use by You or your end-user who ultimately uses your Application in order to specify the type of deployment granted. If you have acquired a Web Author Component Deployment License for distribution to an end-user, you must deliver the corresponding License Key, to that end-user.
- 3. The License Deployment Manager that require one-time activation. During such activation, the unique License Key, Internet protocol address and information derived from the hardware configuration of the system running the License Deployment Manager will be send to Syncro. Multiplexing is not permitted under this Agreement. Your Application must always provide a separate persistent session for each browser, and you may only have as many sessions open at one time as the number of browsers authorized by Syncro under the Web Author Component Deployment License used. You may not combine transactions from multiple browsers onto a single session.

6. SUPPORT AND MAINTENANCE PACK

1. A Support and Maintenance Pack ("SMP") is a time-limited right for Software technical support, updates, and upgrades, which you may elect to purchase in addition to the corresponding Deployment of Application for you or your End-Users. Technical support only covers issues or questions resulting directly out of the operation of the Software. Syncro will not provide you or your End-User with generic consultation, assistance, or advice under any circumstances.
2. If you redeploy the Application with the new major version of the Software and if your End-User's corresponding SMP is still in force, he is entitled to this release of the Application, with no additional fee. If you do not purchase SMP for your End-User, he will not be entitled to this release of the Application unless the Software update or upgrade will be provided free of charge by Syncro, under certain circumstances, or you will buy an upgrade for that End-User.
3. If you licensed a subscription like deployment, SMP is included in the applicable subscription fee, and is valid for the entire subscription period.
